

JOB DESCRIPTION – Project Engineer

Tein Technology is passionate about new technologies. You too? Are you looking for a varied job, a challenge in the field where you can analyze, install and resolve technical issues in high end security systems? **Then join our technical team as Project Engineer!**

Mainly active in Belgium and the Netherlands, we are a leader in the integration of voice and video platforms for clients such as banks, ports, road and waterway traffic centers and the police.

RESPONSIBILITIES

As Project Engineer, you will be part of the Operations Department of Tein Technology. You will be responsible for the implementation of new installations at the client. Furthermore, you will handle the preventive and corrective maintenance of different products and solutions installed at the customers site. Your tasks are mainly:

Project Based:

- Implement and install projects:
 - Prepare future installations in lab environment.
 - Install and commission the solution at the customers site.
 - Give training sessions to Users and Administrators.
 - Identify, log, describe, escalate and follow up until resolution all issues arising during project implementation.
 - Document the installation (As-built) and create user manuals.
- Act as technical focal point towards the customer: listen, understand and communicate with the client regarding his “wishes/ requirements” and report towards your colleagues.
- Perform upgrades and extensions on existing installations.
- Interact with the presales team on the design of the solution in the presales phase.
- Act as technical Project Manager for “small” projects where no dedicated PM is defined.
 - Preparation and design of our solutions.
 - Independent site survey and analysis of the customer requirements.
 - Detect, report and document the potential risks towards PM.
 - Manage subcontractors on site.
 - Report progress planning project/subproject.

Maintenance:

- Execute first and second line corrective maintenance 24H/7D on different products/technologies.
- Carry out preventive visits following maintenance contracts.
- Update site documentation after intervention (software release, installed base...).
- Participate in tests setups required for demo, exposition and/or product validation.

POSITION'S REQUIREMENTS

Education, Knowledge & Work Experience:

- Industrial engineer Electronics/ICT or Master in IT.
- Minimum 3 years of experience in ICT, preferably project based.
- Knowledge about networking (CCNA), network security, routing & switching, virtual technology, databases, and Windows Server.

Required skills:

- Fluent in Dutch and English, good knowledge of French is a plus.
- Excellent communication skills (oral as well as written).
- Good client relationships: being the technical contact person.
- Analytical thinking and able to create technical designs.
- Open minded, innovative and proactive.
- Being autonomous whilst being a team player.
- Dynamic, flexible and eager to learn.
- Being solution driven, a passion for problem solving.

OFFER

- A very dynamic 'family owned' company, where every employee counts and is appraised for his/her qualities.
- High end technological solutions.
- Responsibilities and challenges, openness and collaboration.
- Internal and external technical trainings.
- Flexible hours to avoid partially mobility problems.
- A nice and informal work environment.
- Attractive salary package with some excellent benefits: a company car, fuel card, attractive pension plan, birthday gift, laptop, mobile phone and net expenses.
